And the use of specific brands of products or services by TransCelerate and its collaboration partners in developing the SDR Reference Implementation should not be viewed as any endorsement of such products or services. To the extent that the SDR Reference Implementation incorporates or relies on any specific branded products or services, this resulted out of the practical necessities associated with making a reference implementation available to demonstrate the SDR's capabilities.

Document History

Version No.	Date	Author	Revision Description
V1.0	14-Mar-2022	Nachiket Vaidya / Viswesh Mb	Initial Version
V1.5	14-Mar-2022	Indu Sekhar Sajja / Viswesh Mb	Review comments addressed
V2.0	26-Apr-2022	Viswesh Mb	Updated API response for POST
V3.0	05-Aug-2022	Viswesh Mb	Updated with latest version of API Endpoints
V4.0	20-Mar-2023	Viswesh Mb	Added new sections to list USDM version specific Study endpoints in section 3.2, 3.3 and 3.4. Added section 3.7, 3.8 and 3.9 for Change audit, Raw JSON and eCPT export endpoints.

1. Introduction

1.1. Overview

The SDR RI implements the CDISC DDF Reference Architecture which include USDM model and API Specifications defined using the OpenApi Specification. The API Layer of the SDR Reference Implementation complies with the Open API Specification (OAS) which allow systems to discover and understand the capabilities of the service without access to source code, documentation, or through network traffic inspection. When properly defined, a consumer can understand and interact with the remote service with a minimal amount of implementation logic.

It follows the REST architectural style that uses HTTP requests to GET and POST data. RESTful architecture is not linked with any technology or platform, it does not dictate exactly how to build an API. Instead, it introduces the best practices known as constraints. They describe how the server processes requests and responds to them. Operating within these constraints, the system gains desirable properties such as reliability, ease of use, improved scalability and security, low latency while enhancing the system performance and helping achieve technology independence in the process.

1.2. Scope of Document

This document details the list of API endpoints available in the Study Definition Repository Reference Implementation and provides sample Request and Response for each endpoint. These endpoints include implementation of the CDISC USDM API Specification and additional SDR Specific endpoints supporting the SDR RI features. It also explains the possible reasons behind the various error codes returned by the API. The technical design and implementation of these APIs is out of scope.

1.3. Intended Audience

The document is a guide for users/vendors who want to integrate and consume the SDR API to store and retrieve study definitions in USDM format.

1.4. Definitions and Acronyms

Term / Abbreviation	Definition
API	Application Programming Interface
DDF	Digital Data Flow
JSON	JavaScript Object Notation

REST	Representational State Transfer
SDR	Study Definition Repository
URL	Uniform Resource Locator
USDM	Unified Study Definitions Model

2. Pre-Requisites

To access APIs, a client certificate must be generated, and a postman rest client should be configured.

2.1. Self-signed Certificate Generation

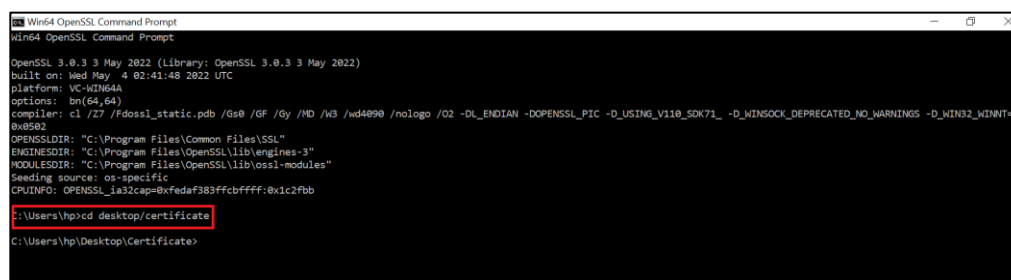

Certificate can be created by using any one of the below Tools.

- Open SSL
- PowerShell

2.1.1. Certificate generation with OpenSSL

- Install the OpenSSL.
- Run the OpenSSL Command Prompt and set the directory to the folder where certificate to be stored.

Figure 1 OpenSSL Command Prompt

```

Win64 OpenSSL Command Prompt
Win64 OpenSSL Command Prompt
OpenSSL 3.0.3 3 May 2022 (Library: OpenSSL 3.0.3 3 May 2022)
built on: Wed May 4 02:41:48 2022 UTC
platform: VC-WIN64A
options: bn(64,64)
compiler: cl /Z7 /foss1_static.pdb /Gso /GF /Gy /MD /W3 /wd4090 /nologo /O2 -DL_ENDIAN -DOPENSSL_PIC -DUSING_V110_SDK71_ -D_WINSOCK_DEPRECATED_NO_WARNINGS -D_WING32_WINNT=0x0902
OPENSSLDIR: "C:\Program Files\Common Files\SSL"
ENGINESDIR: "C:\Program Files\OpenSSL\lib\engines-3"
MODULESDIR: "C:\Program Files\OpenSSL\lib\openssl-modules"
seeding source: os-specific
CPUINFO: OPENSSL_ia32cap=0xfedaf383fcbffff:0x1c2fbb
C:\Users\hp>cd desktop\certificate
C:\Users\hp\Desktop\Certificate>

```

- Run the below command → provide Enter PEM pass phrase and save the pass phrase to provide it on the command to generate .pfx certificate.

```
openssl req -x509 -newkey rsa:4096 -sha256 -keyout my.key -out my.crt -subj "/CN=test.com" -days 600
```

Figure 2 OpenSSL Command

```
C:\Users\hp>cd desktop/certificate
C:\Users\hp\Desktop\Certificate>openssl req -x509 -newkey rsa:4096 -sha256 -keyout my.key -out my.crt -subj "/CN=test.com" -days 600
.....
Enter PEM pass phrase:
Verifying - Enter PEM pass phrase:
-----
```

- iv. Run the below command to generate the .pfx certificate.

```
openssl pkcs12 -export -name "test.com" -out my.pfx -inkey my.key -in my.crt
```

Provide the below details.

Enter pass phrase for my.key: Provide the pass phrase passed on step 3

Enter Export Password: Provide the password for .pfx certificate and save it for later use.

Figure 3 Export Certificate

```
C:\Users\hp\Desktop\Certificate>openssl req -x509 -newkey rsa:4096 -sha256 -keyout my.key -out my.crt -subj "/CN=test.com" -days 600
.....
Enter PEM pass phrase:
Verifying - Enter PEM pass phrase:
-----
C:\Users\hp\Desktop\Certificate>openssl pkcs12 -export -name "test.com" -out my.pfx -inkey my.key -in my.crt
Enter pass phrase for my.key:
Enter Export Password:
Verifying - Enter Export Password:
-----
```

- v. Exported .pfx certificate will be stored in the directory where OpenSSL was installed.

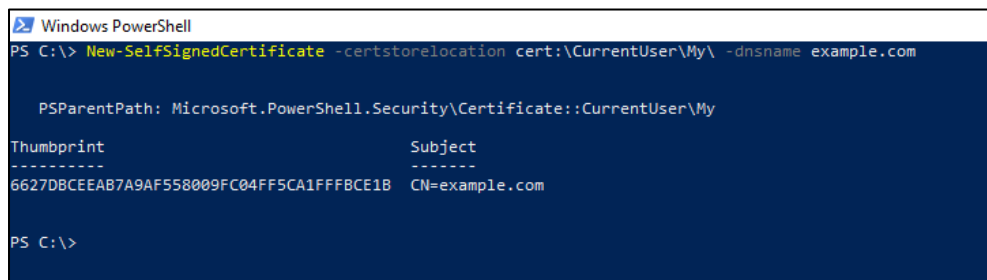

Note: Share the .pfx certificate and the password to SDR Support team to get access to SDR API's on Demo Environment.

2.1.2. Certificate generation with PowerShell

- i. Open PowerShell and run the following command to generate the self-signed certificate.

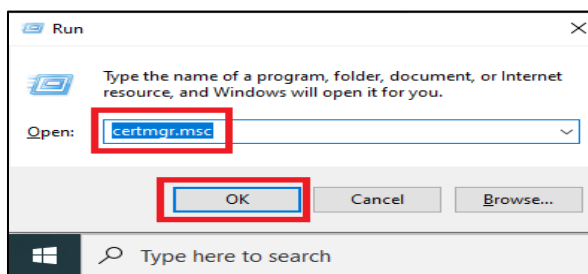

```
New-SelfSignedCertificate -certstorelocation cert:\CurrentUser\My\ -dnsname example.com
```

Figure 4 PowerShell Command

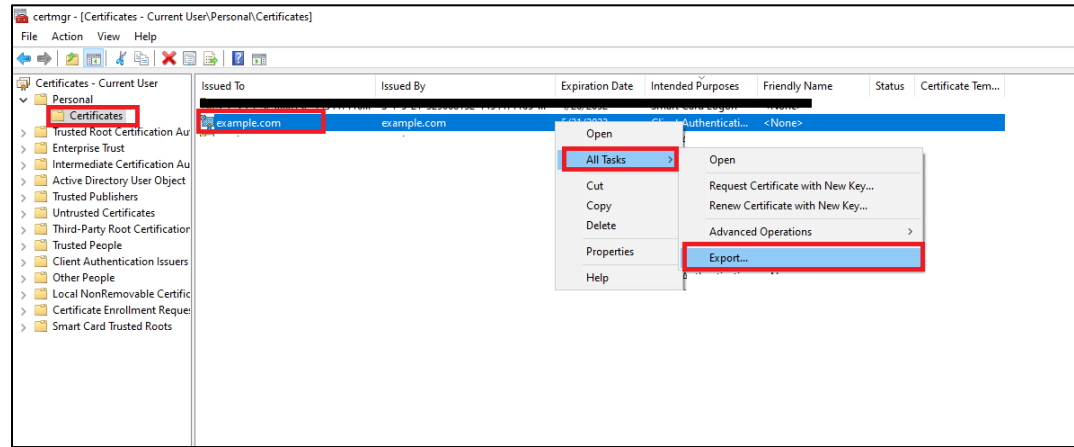

- ii. To Export the certificate in .pfx format, go to run → type certmmgr.msc and click ok

Figure 5 Run Window

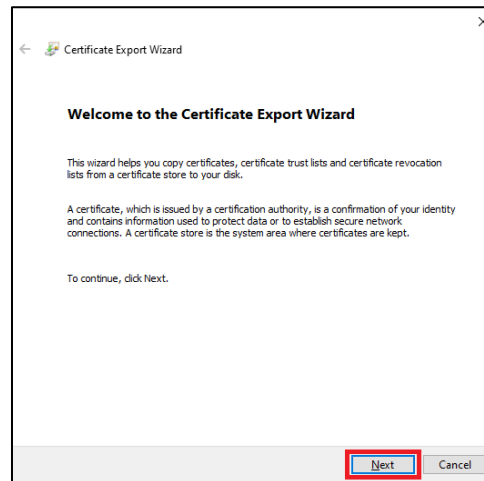

- iii. In certificate manager go to personal → certificates → select the generated certificate and right click select All Tasks → Select Export.

Figure 6 Certificate Manager Console

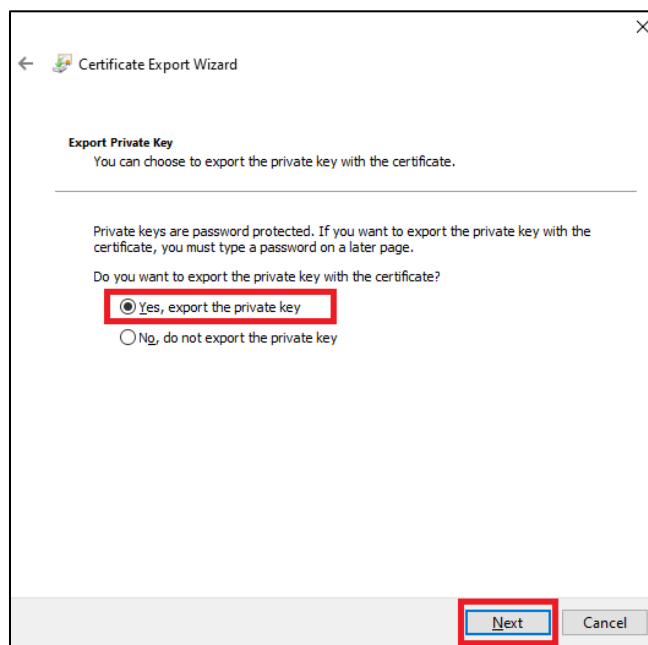

- iv. In Certificate Export Wizard click Next to continue.

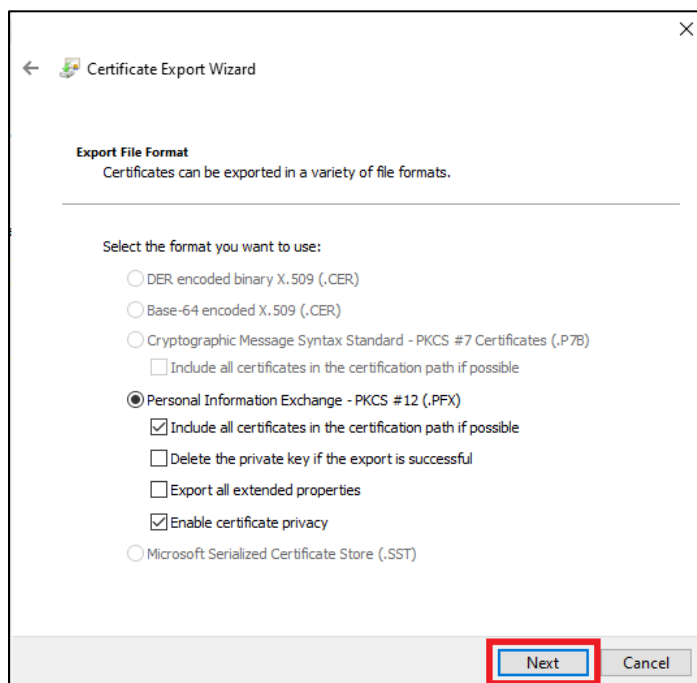

Figure 7 Certificate Export Wizard

- v. Select export the private key option and click next.

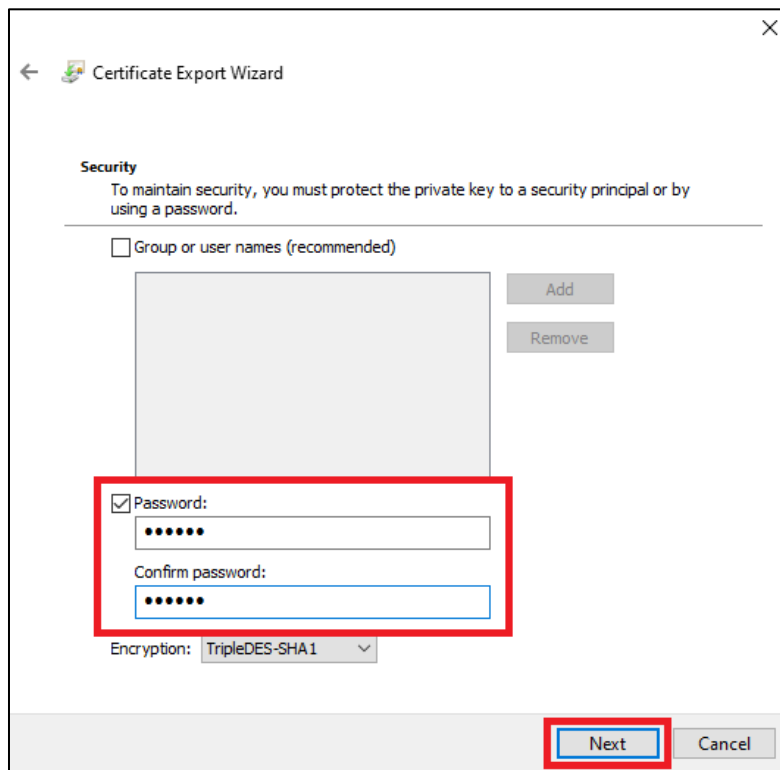

Figure 8 Export Private Key

- vi. Leave the defaults and click next.

Figure 9 Certificate Format .PFX

- vii. Provide the password for certificate and click next.

Figure 10 Password for Certificate

The image shows a 'Certificate Export Wizard' window with a 'Security' section. The 'Security' section contains the text: 'To maintain security, you must protect the private key to a security principal or by using a password.' Below this text, there is a checkbox labeled 'Group or user names (recommended)' which is unchecked. To the right of this checkbox is a large empty rectangular box, and to its right are 'Add' and 'Remove' buttons. Below the 'Group or user names' section, there is a checkbox labeled 'Password:' which is checked. To the right of this checkbox are two password input fields, one for 'Password:' and one for 'Confirm password:', both containing six dots. Below the password fields is an 'Encryption:' label followed by a dropdown menu showing 'TripleDES-SHA1'. At the bottom right of the window, there are 'Next' and 'Cancel' buttons. Red rectangular boxes highlight the 'Password:' checkbox and its associated input fields, and the 'Next' button.

← Certificate Export Wizard

To maintain security, you must protect the private key to a security principal or by using a password.

☐ Group or user names (recommended)

Add
Remove

☒ Password:
.....
Confirm password:
.....

Encryption: TripleDES-SHA1

Next Cancel

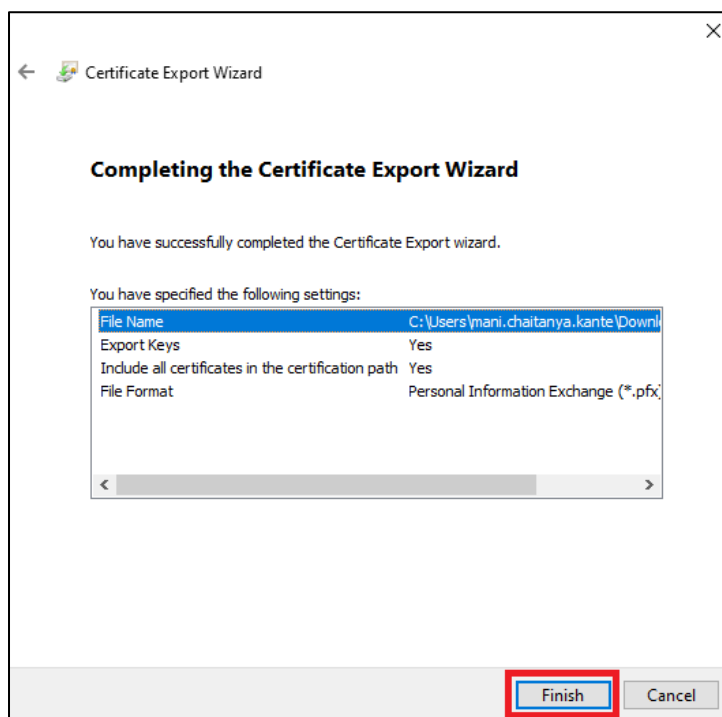

- viii. Select the path to save the certificate.

Figure 11 Certificate File Name

- ix. Click on Finish.

Figure 12 Certificate Export Wizard

- x. Exported .pfx certificate will be stored on the folder path provided on step 8.

Note: Share the .pfx certificate and the password to SDR Support team to get access to SDR API's on Demo environment.

3. API End Points

SDR Reference Implementation exposes the following REST Endpoints to deliver application functionality including storing and retrieving study definitions. All the SDR RI API endpoints conform to the CDISC USDM format mentioned in [USDM Conformance for SDR RI V1](#) for USDM Version 1.0 and in [USDM Conformance for SDR RI V2](#) for USDM Version 1.9. For the Reference Implementation, only the required field validations mentioned in the CDISC USDM document have been included.

3.1. Token

This endpoint allows user to get an access token to access API's by providing a username and password in the request body. This access token must be passed as an authorization header for the other API endpoints.

Table 1 GET Token Endpoint

Method	URL
POST	/api/auth/token

REQUEST PARAMETERS

	OR { "statusCode": "400", "message": "Invalid Credentials" }	
500	<i>Internal Server Error</i>	Web server/Web API down

3.2. API Version -> USDM Version Mapping

USDM version specific Study endpoints will allow users to create studies conforming to a specific USDM version (1 major and any related minor versions) and validate the study against conformance rules corresponding to that version. This endpoint allows user to get mapping between SDR API versions and CDISC USDM versions.

Table 4 GET API version ->USDM Version Mapping Endpoint

Method	URL
GET	/api/versions

RESPONSE

Table 5 API version ->USDM Version Mapping Response

Status	Response	Comments
200	{ "SDRVersions": [{ "apiVersion": "mvp", }	

	<pre> "usdmVersions": ["mvp"], { "apiVersion": "v1", "usdmVersions": ["1.0"], }, { "apiVersion": "v2", "usdmVersions": ["1.9"], }] </pre>

500	<i>Internal Server Error</i>	Web server/Web API down

3.3.3. POST Study Definitions

This endpoint allows user to add and/or update a study definition in SDR that conforms to the USDM structure. The study GET endpoint allows the users to fetch data for individual section whereas the section specific adds/updates are not in scope of SDR Reference Implementation.

3.3.3.1. POST - Add Study Definition

For the first time, when a study is pushed into the SDR, the uuid fields in the JSON data must be empty. SDR will generate UUID for the uuid fields.

Table 12 POST Study V1 Endpoint

Method	URL
POST	/api/v1/studydefinitions

REQUEST PARAMETERS

Table 13 POST Study V1 Request Parameters

Type	Param Name	Sample Values
Body		Refer Request Body for POST – Add New Study DefinitionV1 for the JSON Data

Header	usdmVersion	1.0

RESPONSE

Table 14 POST Study V1 Response

Status	Response	Comments
201	Refer <u>Response Body for POST – Add Study DefinitionV1</u> for the JSON Data	Successful. For a new study document added into SDR, the unique IDs for Study and Study Design are generated by system and returned in response body along with SDR Upload Version is defaulted to “1”. For updates to an existing study, the version is incremented by 1.
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

3.3.3.2. POST - Update Study Definition

- i. For adding new elements to an existing study definition section
 - o **uuid** for the study should be passed in the request body

- **uuid** for the study and **uuid** for the studyDesign should be passed when updating study design data.
 - New elements should be passed without **id** field data along with existing elements including SDR generated **id** values in the request body.
 - SDR will generate UUID for only the new elements mentioned in the request and update the data for existing elements that had a valid UUID in the request.
- ii. For example, there is an existing study definition in SDR as mentioned in Study Definition – **Existing DataV1**. If a new element is to be added to study objectives, the existing study data with the new element must be sent in the request body as mentioned in Request Body for POST – **Update New Study DefinitionV1**.

Table 15 POST Study V1 Endpoint

403	<i>Forbidden</i>	Invalid Client Certificate
404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

3.4. V2 API (USDM Version - 1.9)

3.4.1. GET Study

This endpoint allows user to retrieve the different study elements for a particular study for a specific SDR upload version. This endpoint also allows user to retrieve specific sections.

LIST OF STUDY SECTIONS:

- studyTitle
- studyVersion
- studyType
- studyRationale
- studyAcronym
- studyIdentifiers
- studyPhase
- businessTherapeuticAreas
- studyProtocolVersions
- studyDesigns

401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.

403	<i>Forbidden</i>	Invalid Client Certificate
404	<pre>{ "statusCode": "404", "message": "The requested study document not found" }</pre>	Requested Study Id is not found, or the request URL path is not valid
500	<i>Internal Server Error</i>	Web server/Web API down

3.4.2. GET Study Design

Retrieves the different study design elements for a particular study for the SDR upload version. This endpoint also allows the user to retrieve specific study design sections.

LIST OF STUDY DESIGN SECTIONS:

- studyDesignName
- studyDesignDescription
- trialIntentType
- trialType
- interventionModel
- studyCells
- studyIndications
- studyInvestigationalInterventions
- studyPopulations
- studyObjectives
- studyScheduleTimelines
- therapeuticAreas
- studyEstimands
- encounters
- activities
- studyDesignRationale
- studyDesignBlindingScheme
- biomedicalConcepts
- bcCategories
- bcSurrogates

Table 21 GET Study Design V2 Endpoint

Method	URL

REQUEST PARAMETERS

Table 22 GET Study Design Request V2 Parameters

Type	Param Name	Values	Mandatory	Sample Values
Query Parameter	study_uuid	String	Yes	25f58eb5-bda8-4c85-8a27-685af9f6743d
Query Parameter	sdruploadversion	Integer	No	3
Query Parameter	listofelements	String	No	The parameter should be comma separated values of the section names. For example, "activities,encounters"
Header	Authorization	String	Yes	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmpBWVhZR2FYRUpsOGxWMFRPSSIsImtpZCI6IjJaUXBKM1VwYmpBWVhZR2FYRUpsOGxWMFRPSSJ9.eyJhdWQiOiJhcGk6Ly9iZDhiZjM2Zi0yYTczLTQxMzYtODQxOS0wYzlwY2U5NGM1YmMiLCJpc3MiOiJodHRwczovL

				3N0cy53aW5kb3dzLm5ldC9hM
Header	usdmVersion	String	Yes	1.9

RESPONSE

Table 23 GET Study Design V2 Response

Status	Response	Comments
200	Refer <u>Response for GET Study DesignV1.9</u> for the JSON Data	Successful
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }	This can occur when requested Study Id is not found or Study Design is not found.

	OR { "statusCode": "404", "message": "The requested study design not found" }	
500	<i>Internal Server Error</i>	Web server/Web API down

3.4.3. POST/PUT Study Definitions

This endpoint allows user to add and/or update a study definition in SDR that conforms to the USDM structure. The PUT endpoint supports updates to specific study elements only when entire study data is sent in the request body. If partial study elements (conforming to specific USDM version) are sent in request, the API will create study version with only the elements sent in request.

3.4.3.1. POST - Add Study Definition

For the first time, when a study is pushed into the SDR, the studyId field in the JSON data must be empty. SDR will generate UUID for the studyId field. The Id for the other classes is mandatory, user defined, and expected to be sent in the request.

Table 24 POST Study V2 Endpoint

Method	URL
POST	/api/v2/studydefinitions

REQUEST PARAMETERS

Table 25 POST Study V2 Request Parameters

Type	Param	Values
------	-------	--------

Body		Refer Request Body for POST – Add New Study DefinitionV1.9 for the JSON Data
Header	Authorization	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmpBWVhZR2FYRUpsOGxWMFRPSSIsImtpZCI6IjJaUXBKM1VwYmpBWVhZR2FYRUpsOGxWMFRPSSJ9.eyJhdWQiOiJhcGk6Ly9iZDhiZjM2Zi0yYTczLTQxMzYtODQxOS0wYzlwY2U5NGM1YmMiLCJpc3MiOiJodHRwczovL3N0cy53aW5kb3dzLm5ldC9hM
Header	usdmVersion	1.9

RESPONSE

Table 26 POST Study V2 Response

Status	Response	Comments
201	Refer <u>Response Body for POST – Add Study DefinitionV1.9</u> for the JSON Data	Successful. For a new study document added into SDR, the unique IDs for Study and Study Design are generated by system and returned in response body along with SDR Upload Version is defaulted to “1”. For updates to an existing study, the version is incremented by 1.
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

3.4.3.2. PUT - Update Study Definition

- i. For adding new elements to an existing study definition section

- New elements should be passed along with existing elements in the request body.
- ii. For example, there is an existing study definition in SDR as mentioned in Study Definition – **Existing DataV1.9**. If a new element is to be added to study objectives, the existing study data with the new element must be sent in the request body as mentioned in Request Body for PUT – **Update New Study DefinitionV1.9**.

404	{ "statusCode": "404", "message": "The requested study document not found" }	Requested Study Id is not found, or the request URL path is not valid
500	<i>Internal Server Error</i>	Web server/Web API down

3.8. GET Raw JSON

This endpoint allows user to retrieve a particular study irrespective of the usdmVersion that is stored in SDR. This is useful for retrieving study data in plain text (stringified JSON), which is conformant to a USDM version that is not being supported in the current running instance of SDR. At a given point in time SDR will only support 3 USDM versions. When it is upgraded to a version that doesn't support any of the earlier versions of USDM, but the repository has studies conforming to those deprecated version, the data can be still retrieved via this endpoint. The version specific endpoints of that deprecated USDM version would have been decommissioned.

Table 42 GET Raw JSON Endpoint

Method	URL
GET	/api/studydefinitions/{studyId}/rawdata

REQUEST PARAMETERS

Table 43 GET Raw JSON Request Parameters

Type	Param Name	Values	Mandatory	Sample Values

500	<i>Internal Server Error</i>	Web server/Web API down

4. Testing the API Endpoint

4.1. Postman REST client Setup

This section details steps to test the SDR RI API endpoints using a REST client. For the purpose of this document the tool used is Postman REST Client.

PRE-REQUISITES:

- Self-Signed .pfx certificate configured for SDR API Access.
- Install **Postman Tool**

STEPS:

- Open postman and go to “Settings” option.

Figure 13 Postman Upload Certificate

- Go to “Certificates” tab and upload the client certificate and provide the Host Name and Passphrase (certificate password) for the client certificate.

Figure 14 Postman Add Client Certificate

4.2. Accessing the GET API

STEPS:

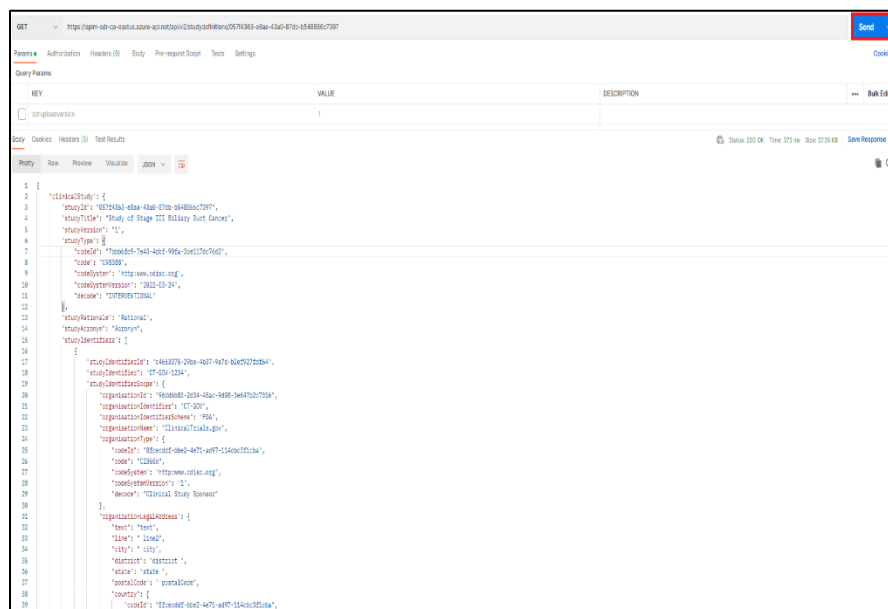

- i. Enter the URL for the GET Request URL (APIM endpoint) as mentioned below.
<https://apim-sdr-envname-eastus.azure-api.net/api/v2/studydefinitions/{studyId}>
- ii. Get the **StudyId** from **Response for GET StudyV1.9** and replace the Study ID path parameter value in the GET URL.

Figure 15 Postman set HTTP Request for GET

- iii. Click on the “Send” button to get the study definition data for given studyId.

Figure 16 Postman Send Request

- iv. For a valid certificate and correct SDR API URL, the API Response of HTTP Status code 200 along with the data will be returned.

[illegible]

- 400 – The server cannot or will not process the request due to something that is perceived to be a client error
- 403 - indicates that the server understands the request but refuses to authorize it
- 404 - indicates that the server cannot find the requested resource
- Incorrect Domain/hostname
- Incorrect Protocol
- Incorrect Method
