### **SDR API User Guide**

#### **Version 7.0**

#### **Disclaimer**

These materials and information, as well as the underlying code/application they relate to are provided by TransCelerate Biopharma Inc. AS IS. Any party using or relying on this information and, these materials and/or the underlying code/application do so entirely at their own risk. Neither TransCelerate nor its members will bear any responsibility or liability for any harm, including indirect or consequential harm, that a user may incur from use or misuse of this information, materials, or underlying code/application.

TransCelerate does not endorse any particular software, system, or service. And the use of specific brands of products or services by TransCelerate and its collaboration partners in developing the SDR Reference Implementation should not be viewed as any endorsement of such products or services. To the extent that the SDR Reference Implementation incorporates or relies on any specific branded products or services, this resulted out of the practical necessities associated with making a reference implementation available to demonstrate the SDR's capabilities.

## Document History

Version No.	Date	Author	Revision Description
V1.0	14-Mar-2022	ACN	Initial Version
V1.5	14-Mar-2022	ACN	Review comments addressed
V2.0	26-Apr-2022	ACN	Updated API response for POST
V3.0	05-Aug-2022	ACN	Updated with latest version of API Endpoints
V4.0	20-Mar-2023	ACN	Added new sections to list USDM version specific Study endpoints in section 3.2, 3.3 and 3.4. Added section 3.7, 3.8 and 3.9 for Change audit, Raw JSON and eCPT export endpoints.
V4.1	26-Apr-2023	ACN	Deprecated SDR RI Auth Token Endpoint in section 3 and added section 2.2 on steps to obtain user access token to access SDR RI API.
V5.0	23-Jun-2023	ACN	Added API specifications for V3 endpoints
V6.0	17-Oct-2023	ACN	Added API Key authorization specifications
V7.0	18-Mar-2024	ACN	Added V4 APIs for USDM 3.0

## 1. Introduction

### 1.1. Overview

The SDR RI<sup>1</sup> implements the CDISC DDF Reference Architecture which include USDM model and API Specifications defined using the OpenAPI Specification (OAS). The API Layer of the SDR Reference Implementation complies with the OpenAPI Specification which allow systems to discover and understand the capabilities of the service without access to source code, documentation, or through network traffic inspection. When properly defined, a consumer can understand and interact with the remote service with a minimal amount of implementation logic.

It follows the REST architectural style that uses HTTP requests to GET and POST data. RESTful architecture is not linked with any technology or platform, it does not dictate exactly how to build an API. Instead, it introduces the best practices known as constraints. They describe how the server processes requests and responds to them. Operating within these constraints, the system gains desirable properties such as reliability, ease of use, improved scalability and security, low latency while enhancing the system performance and helping achieve technology independence in the process.

### 1.2. Scope of Document

This document details the list of API endpoints available in the Study Definition Repository Reference Implementation and provides sample Request and Response for each endpoint. These endpoints include implementation of the CDISC USDM API Specification and additional SDR Specific endpoints supporting the SDR RI features. It also explains the possible reasons behind the various error codes returned by the API. The technical design and implementation of these APIs is out of scope.

### 1.3. Intended Audience

The document is a guide for users/vendors who want to integrate and consume the SDR RI API to store and retrieve study definitions in USDM format.

### 1.4. Definitions and Acronyms

Term / Abbreviation	Definition
API	Application Programming Interface
DDF	Digital Data Flow
JSON	JavaScript Object Notation
REST	Representational State Transfer
SDR	Study Definition Repository
URL	Uniform Resource Locator
USDM	Unified Study Definitions Model

<sup>1</sup> The SDR Reference Implementation is an attempt to demonstrate the vision of the DDF initiative, not a commercial product. To be clear, TransCelerate does not endorse any particular software, system, or service. And the use of specific brands of products or services by TransCelerate and its collaboration partners in developing the SDR Reference Implementation should not be viewed as any endorsement of such products or services. To the extent that the SDR Reference Implementation incorporates or relies on any specific branded products or services, such as Azure, this resulted out of the practical necessities associated with making a reference implementation available to demonstrate the SDR's capabilities. Users are free to download the source code for the SDR from GitHub and design their own implementations in whatever environments they choose.

## 2. Pre-Requisites

### 2.1. Self-signed Certificate Generation

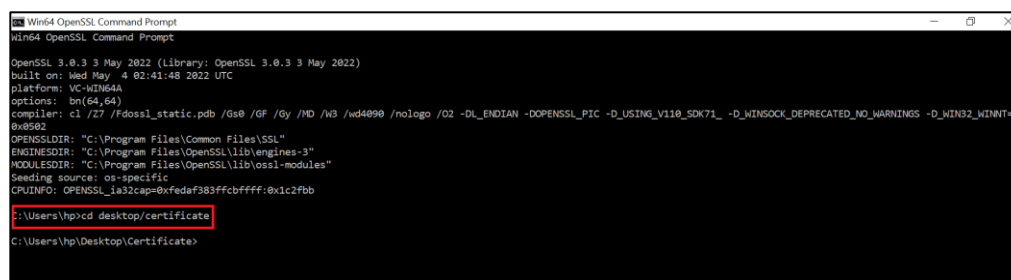

Certificate can be created by using any one of the below Tools.

- Open SSL
- PowerShell

#### 2.1.1. Certificate generation with OpenSSL

- Install the OpenSSL.
- Run the OpenSSL Command Prompt and set the directory to the folder where certificate to be stored.

Figure 1 OpenSSL Command Prompt

```

Win64 OpenSSL Command Prompt
Win64 OpenSSL Command Prompt

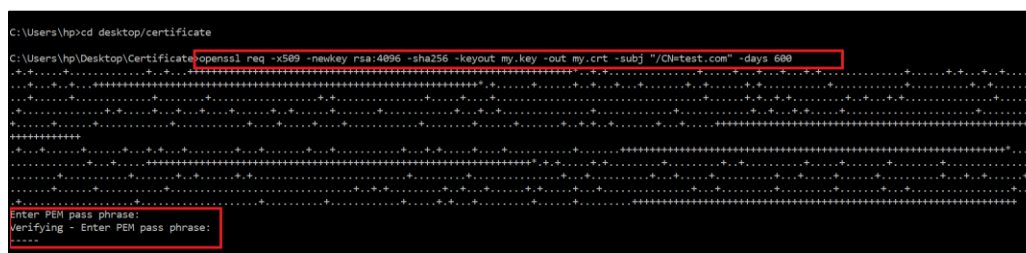

OpenSSL 3.0.3 3 May 2022 (Library: OpenSSL 3.0.3 3 May 2022)
built on: Wed May  4 02:41:48 2022 UTC
platform: VC-v143
options: bn(64,64)
compiler: cl /Z7 /Fdssl_static.pdb /ds0 /GF /Oy /MD /W3 /wd4090 /nologo /O2 -DL_ENDIAN -DOPENSSL_PIC -DUSING_V110_SDK71_ -D_WINSOCK_DEPRECATED_NO_WARNINGS -D_WIN32_WINNT=0x0502
OPENSSLDIR: "C:\Program Files\Common Files\SSL"
ENGINESDIR: "C:\Program Files\OpenSSL\lib\engines-3"
MODULESDIR: "C:\Program Files\OpenSSL\lib\ossl-modules"
seeding source: os-specific
CPUINFO: OpenSSL_ia32cap=0xfedaf383fcbffff:0x1c2fbb

C:\Users\hp>cd desktop/certificate
C:\Users\hp\Desktop\certificate>
  
```

- Run the below command → provide Enter PEM pass phrase and save the pass phrase to provide it on the command to generate .pfx certificate.

```
openssl req -x509 -newkey rsa:4096 -sha256 -keyout my.key -out my.crt -subj "/CN=test.com" -days 600
```

Figure 2 OpenSSL Command

```

C:\Users\hp>cd desktop/certificate
C:\Users\hp\Desktop\certificate>openssl req -x509 -newkey rsa:4096 -sha256 -keyout my.key -out my.crt -subj "/CN=test.com" -days 600
.....
Enter PEM pass phrase:
Verifying - Enter PEM pass phrase:
-----
  
```

- Run the below command to generate the .pfx certificate.

```
openssl pkcs12 -export -name "test.com" -out my.pfx -inkey my.key -in my.crt
```

Provide the below details.

Enter pass phrase for my.key: Provide the pass phrase passed on step 3

Enter Export Password: Provide the password for .pfx certificate and save it for later use.

Figure 3 Export Certificate

```
C:\Users\hp\Desktop\Certificate>openssl req -x509 -newkey rsa:4096 -sha256 -keyout my.key -out my.crt -subj "/CN=test.com" -days 600
.....
Enter PEM pass phrase:
Verifying - Enter PEM pass phrase:
-----
C:\Users\hp\Desktop\Certificate>openssl pkcs12 -export -name "test.com" -out my.pfx -inkey my.key -in my.crt
Enter pass phrase for my.key:
Enter Export Password:
Verifying - Enter Export Password:
```

- v. Exported .pfx certificate will be stored in the directory where OpenSSL was installed.  
**Note:** Share the .pfx certificate and the password to SDR Support team to get access to SDR API's on Demo Environment.

## 2.1.2.Certificate generation with PowerShell

- i. Open PowerShell and run the following command to generate the self-signed certificate.

```
New-SelfSignedCertificate -certstorelocation cert:\CurrentUser\My\ -dnsname example.com
```

Figure 4 PowerShell Command

```
Windows PowerShell
PS C:\> New-SelfSignedCertificate -certstorelocation cert:\CurrentUser\My\ -dnsname example.com

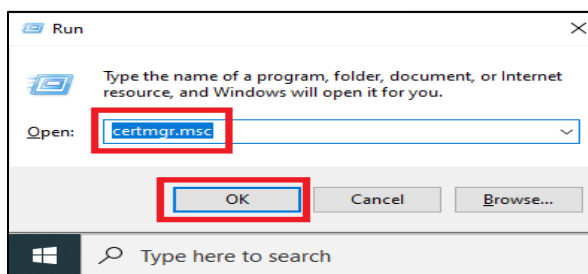

PSParentPath: Microsoft.PowerShell.Security\Certificate::CurrentUser\My

Thumbprint                               Subject
-----
6627DBCEEAB7A9AF558009FC04FF5CA1FFFBCE1B CN=example.com

PS C:\>
```

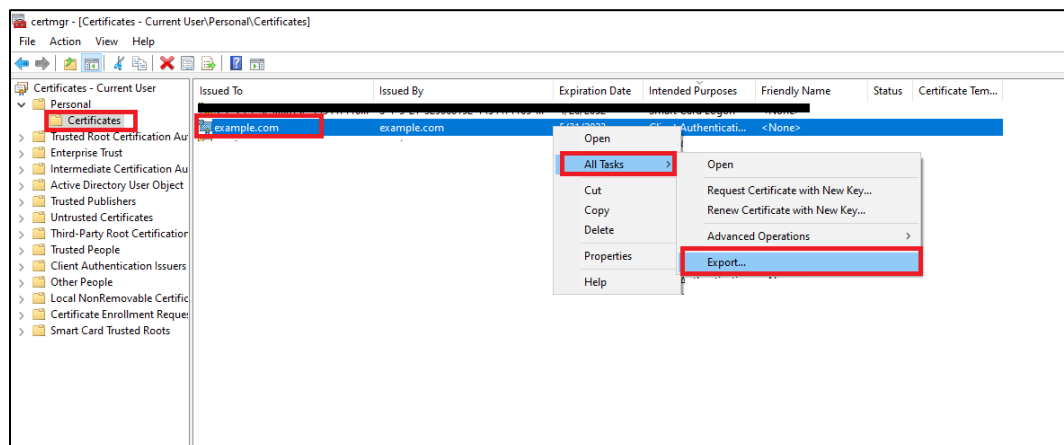

- ii. To Export the certificate in .pfx format, go to run → type certmgr.msc and click Ok.

Figure 5 Run Window

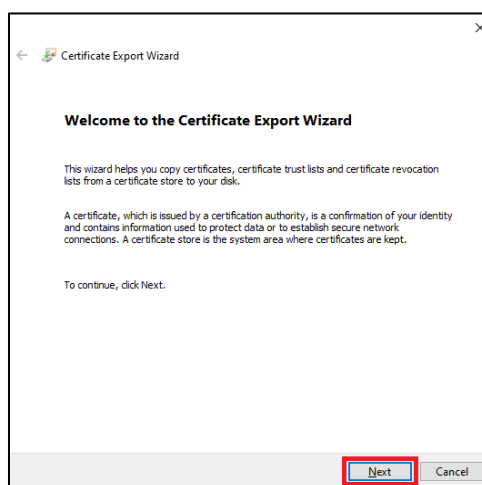

- iii. In certificate manager go to personal → certificates → select the generated certificate and right click select All Tasks → Select Export.

Figure 6 Certificate Manager Console

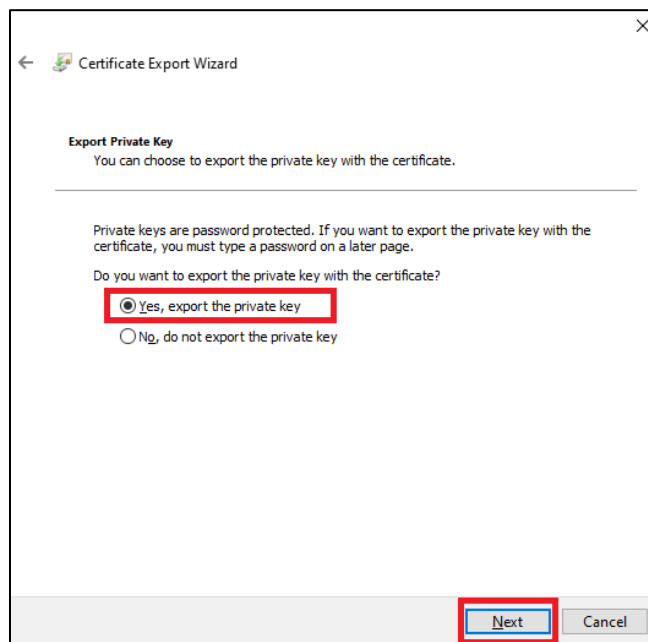

- iv. In Certificate Export Wizard click Next to continue.

Figure 7 Certificate Export Wizard

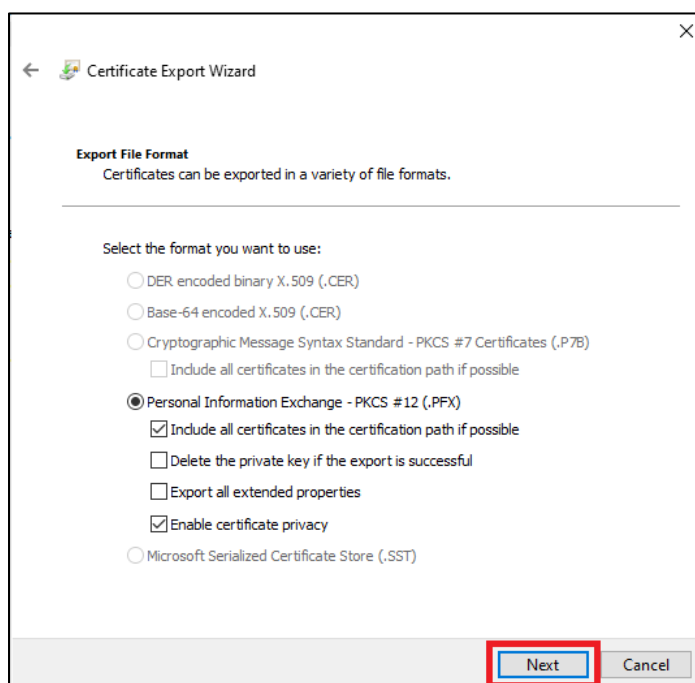

- v. Select export the private key option and click next.

Figure 8 Export Private Key

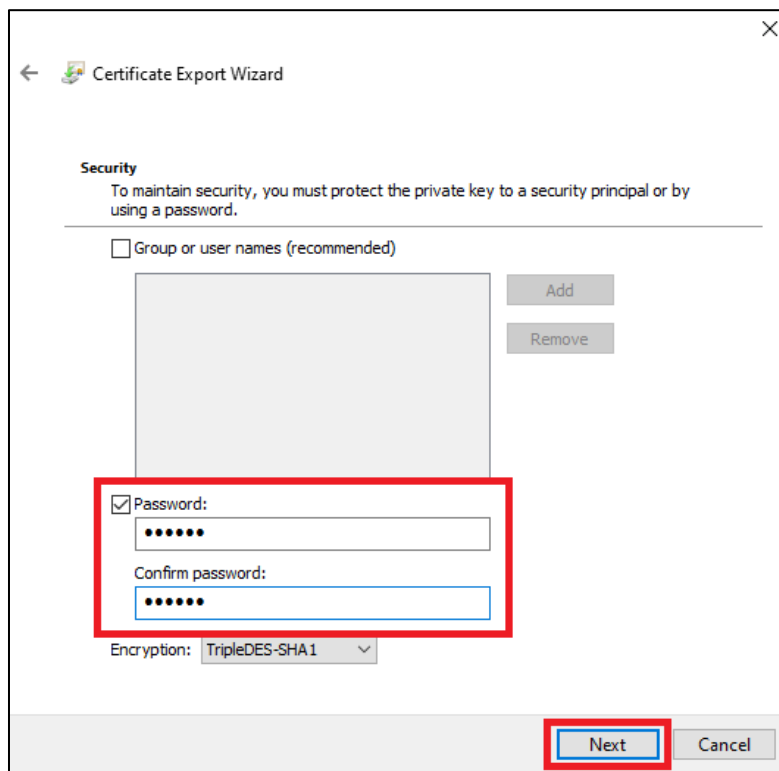

- vi. Leave the defaults and click next.

Figure 9 Certificate Format .PFX

- vii. Provide the password for certificate and click next.

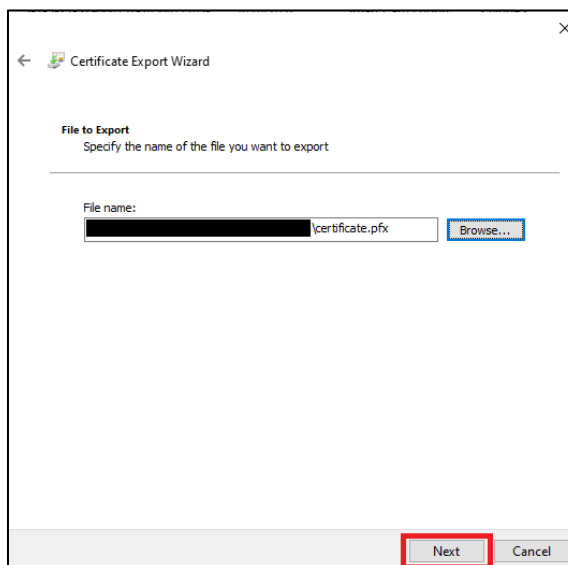

Figure 10 Password for Certificate

The screenshot shows the 'Certificate Export Wizard' window, specifically the 'Security' step. The window title is 'Certificate Export Wizard'. Below the title bar, there is a back arrow and a small icon. The main text reads: 'Security. To maintain security, you must protect the private key to a security principal or by using a password.' Below this, there is a checkbox labeled 'Group or user names (recommended)' which is unchecked. To the right of this checkbox are 'Add' and 'Remove' buttons. Below the checkbox is a large empty rectangular box. Further down, there is a checkbox labeled 'Password:' which is checked. Below this checkbox are two text input fields: the first is for the password (displayed as dots) and the second is for the 'Confirm password:' (also displayed as dots). Below these fields is a label 'Encryption:' followed by a dropdown menu showing 'TripleDES-SHA1'. At the bottom right of the window, there are 'Next' and 'Cancel' buttons. The 'Next' button is highlighted with a red rectangle.

- viii. Select the path to save the certificate.

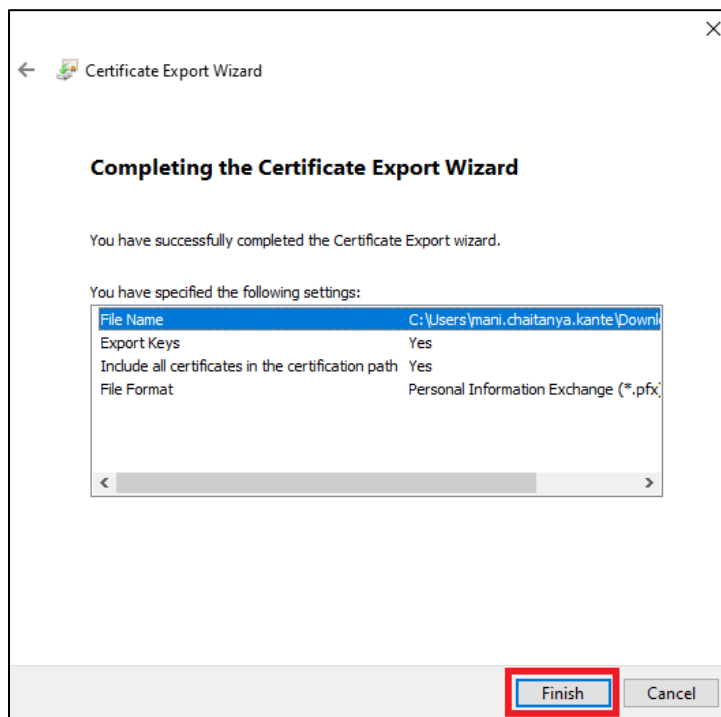

Figure 11 Certificate File Name

The screenshot shows the 'Certificate Export Wizard' window, specifically the 'File to Export' step. The window title is 'Certificate Export Wizard'. Below the title bar, there is a back arrow and a small icon. The main text reads: 'File to Export. Specify the name of the file you want to export.' Below this, there is a label 'File name:' followed by a text input field containing 'certificate.pfx'. To the right of the input field is a 'Browse...' button. At the bottom right of the window, there are 'Next' and 'Cancel' buttons. The 'Next' button is highlighted with a red rectangle.

- ix. Click on Finish.

Figure 12 Certificate Export Wizard

- x. Exported .pfx certificate will be stored on the folder path provided on step 8.  
**Note:** Share the .pfx certificate and the password to SDR Support team to get access to SDR API's on Demo environment.

## 2.2. Authorization

To Access SDR RI APIs, an access token or API-Key must be passed as an authorization header in the request for API endpoints. The choice of which method of authentication you use is up to you.

### 2.2.1. Access Token

A user can get an access token by the following ways.

- i. Using SDR RI UI to get access token. SDR UI application Link – **DDF SDR UI**
- ii. Using any one of Microsoft Authentication Flows if the details of the SDR API hosted environment are available. Refer **Authentication Flows** for more details.

### 2.2.2. API-Key Generation

API-Key can be generated through Developer portal. Refer the document **SDR RI API Key Generation**.

## 3. API End Points

SDR Reference Implementation exposes the following REST Endpoints to deliver application functionality including storing and retrieving study definitions. All the SDR RI API endpoints conform to the CDISC USDM format mentioned in **USDM Conformance for SDR RI V2** for USDM Version 1.9, in **USDM Conformance for SDR RI V2.0.1** for USDM Version 2.0 and in **USDM**

**Conformance for SDR RI V3.0** for USDM Version 3.0. For the Reference Implementation, only the required field validations mentioned in the CDISC USDM document have been included.

### 3.1. API Version -> USDM Version Mapping

USDM version specific Study endpoints will allow users to create studies conforming to a specific USDM version (1 major and any related minor versions) and validate the study against conformance rules corresponding to that version. This endpoint allows user to get mapping between SDR RI API versions and CDISC USDM versions.

Table 1 GET API version ->USDM Version Mapping Endpoint

Method	URL
GET	/api/versions

#### REQUEST PARAMETERS

#### RESPONSE

Table 3 GET API version ->USDM Version Mapping Response

Status	Response	Comments
200	{ "SDRVersions": [ { "apiVersion": "v2", "usdmVersions": [ "1.9" ] } ] }	

	<pre> }, {   "apiVersion": "v3",   "usdmVersions": [     "2.0"   ] }, {   "apiVersion": "v4",   "usdmVersions": [     "3.0"   ] } ] </pre>	
400	<pre> {   "statusCode": "400",   "message": "An error occurred" } </pre>	Application Exception
401	<pre> {   "statusCode": "401",   "message": "Access Denied" } </pre>	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	<pre> {   "statusCode": "404",   "message": "The requested study document not found" } </pre>	Requested Study Id is not found, or the request URL path is not valid
500	<i>Internal Server Error</i>	Web server/Web API down

## 3.2. V2 API (USDM Version - 1.9)

### 3.2.1.GET Study

This endpoint allows user to retrieve the different study elements for a particular study for a specific SDR upload version. This endpoint also allows user to retrieve specific sections.

LIST OF STUDY SECTIONS:

- studyTitle
- studyVersion

- Table 4 GET Study V2 Endpoint*

## REQUEST PARAMETERS

Type	Param Name	Values	Mandatory	Sample Values
Path Parameter	StudyId	String	Yes	25f58eb5-bda8-4c85-8a27-685af9f6743d
Query Parameter	sdruploadversion	Integer	No	2
Query Parameter	Listofelements	string	No	The parameter value should be comma separated values of the section names. For example, "studyDesigns,studyIdentifiers"
Header (Either Authorization bearer token or API-Key)	Authorization	String	Yes	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmpBWWVhZRR2FYRUpsOGxWMFRPSStmltpZCI6IjJaUXBKM1VwYmpBWWVhZRR2FYRUpsOGxWMFRPSStJm2Zi0yYTczLTQxMzYtODQxOS0wYzlwY2U5NGM1YmMiLCJpc3MiOiJodHRwczovL3N0cy53aW5kb3dzLm5ldC9hM
	x-api-key	String	Yes	a7fecf90a4f643eda0b27dddde37b16d

Header	usdmVersion	String	Yes	1.9
--------	-------------	--------	-----	-----

## RESPONSE

Table 6 GET Study V2 Response

Status	Response	Comments

400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }	Requested Study Id is not found, or the request URL path is not valid
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.2.2.GET Study Design

Retrieves the different study design elements for a particular study for the SDR upload version. This endpoint also allows the user to retrieve specific study design sections.

LIST OF STUDY DESIGN SECTIONS:

- studyDesignName
- studyDesignDescription
- trialIntentType
- trialType
- interventionModel
- studyCells
- studyIndications
- studyInvestigationalInterventions
- studyPopulations
- studyObjectives
- studyScheduleTimelines
- therapeuticAreas
- studyEstimands
- encounters

- activities
- studyDesignRationale
- studyDesignBlindingScheme
- biomedicalConcepts
- bcCategories
- bcSurrogates

400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }  OR  { "statusCode": "404", "message": "The requested study design not found" }	This can occur when requested Study Id is not found or Study Design is not found.
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.2.3.POST/PUT Study Definitions

This endpoint allows user to add and/or update a study definition in SDR that conforms to the USDM structure. The PUT endpoint supports updates to specific study elements only when entire study data is sent in the request body. If partial study elements (conforming to specific USDM version) are sent in request, the API will create study version with only the elements sent in request.

#### 3.2.3.1. POST - Add Study Definition

For the first time, when a study is pushed into the SDR, the studyId field in the JSON data must be empty. SDR will generate UUID for the studyId field. The Id for the other classes is mandatory, user defined, and expected to be sent in the request.

Table 10 POST Study V2 Endpoint

## RESPONSE

Table 12 POST Study V2 Response

Status	Response	Comments
201	Refer <a href="#">Response Body for POST – Add Study DefinitionV1.9</a> for the JSON Data	Successful. For a new study document added into SDR, the unique IDs for Study and Study Design are generated by system and returned in response body along with SDR Upload Version is defaulted to “1”. For updates to an existing study, the version is incremented by 1.
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.2.3.2. PUT - Update Study Definition

- i. For adding new elements to an existing study definition section
  - o New elements should be passed along with existing elements in the request body.
- ii. For example, there is an existing study definition in SDR as mentioned in Study Definition – [Existing DataV1.9](#). If a new element is to be added to study objectives, the existing study data with the new element must be sent in the request body as mentioned in Request Body for PUT – [Update New Study DefinitionV1.9](#).

Table 13 PUT Study V2 Endpoint

Method	URL
PUT	/api/v2/studydefinitions/{studyId}

## REQUEST PARAMETERS

### 3.3. V3 API (USDM Version – 2.0)

#### 3.3.1.GET Study

This endpoint allows user to retrieve the different study elements for a particular study for a specific SDR upload version. This endpoint also allows user to retrieve specific sections.

LIST OF STUDY SECTIONS:

- studyTitle
- studyVersion
- studyType
- studyRationale
- studyAcronym
- studyIdentifiers
- studyPhase
- businessTherapeuticAreas
- studyProtocolVersions
- studyDesigns

Table 22 GET Study V3 Endpoint

Method	URL
GET	/api/v3/studydefinitions/{studyId}

#### REQUEST PARAMETERS

Table 23 GET Study V3 Request Parameters

Type	Param Name	Values	Mandatory	Sample Values
Path Parameter	studyId	String	Yes	25f58eb5-bda8-4c85-8a27-685af9f6743d
Query Parameter	sdruploadversion	Integer	No	2
Query Parameter	Listofelements	string	No	The parameter value should be comma separated values of the section names. For example, "studyDesigns,studyIdentifiers"
Header (Either Authorization bearer token or API-Key)	Authorization	String	Yes	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmpBWVhZUR2FYRUpOGxWMFRPSStlmltpZCI6IjJaUXBKM1VwYmpBWVhZUR2FYRUpOGxWMFRPSSJ9.eyJhdWQiOiJhcGk6Ly9iZDhiZjM2Zi0yYTczLTQxMzYtODQxOS0wYzlwY2U5NGM1YmMiLCJpc3MiOiJodHRwczovL3N0cy53aW5kb3dzLm5ldC9hM

401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.

<b>403</b>	<i>Forbidden</i>	Invalid Client Certificate
<b>404</b>	{ "statusCode": "404", "message": "The requested study document not found" }	Requested Study Id is not found, or the request URL path is not valid
<b>500</b>	<i>Internal Server Error</i>	Web server/Web API down

### 3.3.2.GET Study Design

Retrieves the different study design elements for a particular study for the SDR upload version. This endpoint also allows the user to retrieve specific study design sections.

LIST OF STUDY DESIGN SECTIONS:

- studyDesignName
- studyDesignDescription
- trialIntentTypes
- trialType
- interventionModel
- studyCells
- studyIndications
- studyInvestigationalInterventions
- studyPopulations
- studyObjectives
- studyScheduleTimelines
- therapeuticAreas
- studyEstimands
- encounters
- activities
- studyDesignRationale
- studyDesignBlindingScheme
- biomedicalConcepts
- bcCategories
- bcSurrogates
- studyepochs
- studyelements
- studyarms

Table 25 GET Study Design V3 Endpoint

## RESPONSE

Table 27 GET Study Design V3 Response

Status	Response	Comments
200	Refer <b><u>Response for GET Study DesignV2.0</u></b> for the JSON Data	Successful
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception

401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	Forbidden	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }  OR  { "statusCode": "404", "message": "The requested study design not found" }	This can occur when requested Study Id is not found or Study Design is not found.
500	Internal Server Error	Web server/Web API down

### 3.3.3.POST/PUT Study Definitions

This endpoint allows user to add and/or update a study definition in SDR that conforms to the USDM structure. The PUT endpoint supports updates to specific study elements only when entire study data is sent in the request body. If partial study elements (conforming to specific USDM version) are sent in request, the API will create study version with only the elements sent in request.

#### 3.3.3.1. POST - Add Study Definition

For the first time, when a study is pushed into the SDR, the studyId field in the JSON data must be empty. SDR will generate UUID for the studyId. The Id for the other classes is mandatory, user defined, and expected to be sent in the request.

Table 28 POST Study V3 Endpoint

Method	URL
POST	/api/v3/studydefinitions

## REQUEST PARAMETERS

Table 29 POST Study V3 Request Parameters

Type	Param	Values
Body		Refer <b><u>Request Body for POST – Add New Study DefinitionV2.0</u></b> for the JSON Data

404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.3.3.2. PUT - Update Study Definition

- iii. For adding new elements to an existing study definition section
  - o New elements should be passed along with existing elements in the request body.
- iv. For example, there is an existing study definition in SDR as mentioned in Study Definition – **Existing DataV2.0**. If a new element is to be added to study objectives, the existing study data with the new element must be sent in the request body as mentioned in Request Body for PUT – **Update New Study DefinitionV2.0**.

500	Internal Server Error	Web server/Web API down

### 3.3.6.POST Validate USDM Conformance

This endpoint allows user to validate whether the study definition conforms to USDM Version 2.0 without submitting the study definitions. If the study definition is conformant with USDM Version 2.0, success response code (200 - Ok) will be returned, otherwise the endpoint will return list of conformance errors with failure response code (400 – Bad Request).

Table 40 POST Validate USDM Conformance V3 Endpoint

Method	URL
POST	/api/v3/studydefinitions/validate-usdm-conformance

### REQUEST PARAMETERS

### 3.4. V4 API (USDM Version – 3.0)

#### 3.4.1.GET Study

This endpoint allows user to retrieve the different study elements for a particular study for a specific SDR upload version. This endpoint also allows user to retrieve specific sections.

LIST OF STUDY SECTIONS:

- titles
- versionIdentifier
- studyType
- rationale
- documentVersionId
- dateValues
- amendments
- studyIdentifiers
- studyPhase
- businessTherapeuticAreas
- studyDesigns

Table 46 GET Study V4 Endpoint

Method	URL
GET	/api/v4/studydefinitions/{studyId}

#### REQUEST PARAMETERS

Table 47 GET Study V4 Request Parameters

Type	Param Name	Values	Mandatory	Sample Values
Path Parameter	studyId	String	Yes	25f58eb5-bda8-4c85-8a27-685af9f6743d
Query Parameter	sdruploadversion	Integer	No	2
Query Parameter	Listofelements	string	No	The parameter value should be comma separated values of the section names. For example, "studyDesigns,studyIdentifiers"
Header (Either Authorization bearer token or API-Key)	Authorization	String	Yes	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmptBWVhZUR2FYRUpsOGxWMFRPSlslmtpZCI6IjJaUXBKM1VwYmptB

Header	usdmVersion	String	Yes	3.0

## RESPONSE

Table 48 GET Study V4 Response

Status	Response	Comments
200	Refer <b>Response for GET StudyV3.0</b> for the JSON Data	
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }	Requested Study Id is not found, or the request URL path is not valid
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.4.2.GET Study Design

Retrieves the different study design elements for a particular study for the SDR upload version. This endpoint also allows the user to retrieve specific study design sections.

LIST OF STUDY DESIGN SECTIONS:

- name
- label
- description
- trialIntentTypes
- trialTypes

- characteristics
- interventionModel
- studyCells
- indications
- studyInterventions
- population
- objectives
- scheduleTimelines
- therapeuticAreas
- estimands
- encounters
- activities
- rationale
- blindingSchema
- biomedicalConcepts
- bcCategories
- bcSurrogates
- epochs
- elements
- arms
- documentVersionId
- dictionaries
- maskingRoles
- conditions
- organizations
- instanceType

Header	usdmVersion	String	Yes	3.0

## RESPONSE

Table 51 GET Study Design V4 Response

Status	Response	Comments
200	Refer <b>Response for GET Study DesignV3.0</b> for the JSON Data	Successful
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	Forbidden	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }	This can occur when requested Study Id is not found or Study Design is not found.

	OR  { "statusCode": "404", "message": "The requested study design not found" }	
<b>500</b>	<i>Internal Server Error</i>	Web server/Web API down

### 3.4.3.POST/PUT Study Definitions

This endpoint allows user to add and/or update a study definition in SDR that conforms to the USDM structure. The PUT endpoint supports updates to specific study elements only when entire study data is sent in the request body. If partial study elements (conforming to specific USDM version) are sent in request, the API will create study version with only the elements sent in request.

#### 3.4.3.1. POST - Add Study Definition

For the first time, when a study is pushed into the SDR, the studyId field in the JSON data must be empty. SDR will generate UUID for the studyId field. The Id for the other classes is mandatory, user defined, and expected to be sent in the request.

Table 52 POST Study V4 Endpoint

Method	URL
<b>POST</b>	<b>/api/v4/studydefinitions</b>

## REQUEST PARAMETERS

Table 53 POST Study V4 Request Parameters

Type	Param	Values
Body		Refer <b><u>Request Body for POST – Add New Study DefinitionV3.0</u></b> for the JSON Data
Header (Either Authorization bearer token or API-Key)	Authorization	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmpBWVhZUR2FYRUpOGxWMFRPSSIsImtpZCI6IjJaUXBKM1VwYmpBWVhZUR2FYRUpOGxWMFRPSSJ9.eyJhdWQiOiJhcGk6Ly9iZDhiZjM2Zi0yYTczLTQxMzYtODQxOS0wYzlwY2U5NGM1YmMiLCJpc3MiOiJodHRwczovL3N0cy53aW5kb3dzLm5ldC9hM
	x-api-key	a7fecf90a4f643eda0b27dddde37b16d
Header	usdmVersion	3.0

## RESPONSE

Table 54 POST Study V4 Response

Status	Response	Comments
201	Refer <b><u>Response Body for POST – Add Study DefinitionV3.0</u></b> for the JSON Data	Successful. For a new study document added into SDR, the unique IDs for Study and Study Design are generated by system and returned in response body along with SDR Upload Version is defaulted to “1”. For updates to an existing study, the version is incremented by 1.
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.4.3.2. PUT - Update Study Definition

- v. For adding new elements to an existing study definition section
  - o New elements should be passed along with existing elements in the request body.
- vi. For example, there is an existing study definition in SDR as mentioned in Study Definition – **Existing DataV3.0**. If a new element is to be added to study objectives, the existing study data with the new element must be sent in the request body as mentioned in Request Body for PUT – **Update New Study DefinitionV3.0**.

Table 55 PUT Study V4 Endpoint

Method	URL
PUT	/api/v4/studydefinitions/{studyId}

## REQUEST PARAMETERS

Table 56 PUT Study V4 Request Parameters

Type	Param	Values
Body		Refer <b><u>Request Body for PUT – Update New Study DefinitionV3.0</u></b> for the JSON Data

	x-api-key	a7fecf90a4f643eda0b27dddde37b16d
Header	usdmVersion	3.0

## RESPONSE

Table 57 PUT Study V4 Response

Status	Response	Comments
201	Refer <b><u>Response Body for PUT – Update Study DefinitionV3.0</u></b> for the JSON Data	Successful. The new element in the section will be added on along with the existing element.
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception
401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate
404	<i>Resource Not Found</i>	When the request URL is not valid.
500	<i>Internal Server Error</i>	Web server/Web API down

### 3.4.4.GET Schedule of Activities (SoA)

This endpoint allows user to retrieve the Schedule of Activities (SoA) for a particular study. Also, the endpoint has optional parameter to retrieve the SoA for a particular study design and a particular schedule timeline.

Table 58 GET SoA V4 Endpoint

Method	URL
GET	/api/v4/ studydefinitions/{studyId}/studydesigns/soa

## REQUEST PARAMETERS

Table 59 GET SoA Request V4 Parameters

Type	Param Name	Values	Mandatory	Sample Values
Path Parameter	StudyId	String	Yes	25f58eb5-bda8-4c85-8a27-685af9f6743d
Query Parameter	Sdruploadversion	Integer	No	3
Query Parameter	Studydesignid	String	No	Value in studyDesignId
Query Parameter	studyWorkflowid	String	No	This is any one of the values in scheduleTimelineId under studyScheduleTimelines.
Header (Either Authorization bearer token or API-Key)	Authorization	String	Yes	Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJSUzI1NiIsIng1dCI6IjJaUXBKM1VwYmpBWVhZR2FYRUpsOGxWMFRPSSIsImtpZCI6IjJaUXBKM1VwYmpBWVhZR2FYRUpsOGxWMFRPSSJ9.eyJhdWQiOiJhcGk6Ly9iZDhiZjM2Zi0yYTczLTQxMzYtODQxOS0wYzlwY2U5NGM1YmMiLCJpc3MiOiJodHRwczovL3N0cy53aW5kb3dzLm5ldC9hM
	x-api-key	String	Yes	a7fecf90a4f643eda0b27dddde37b16d
Header	usdmVersion	String	Yes	3.0

## RESPONSE

Table 60 GET SoA V4 Response

Status	Response	Comments
200	Refer <b>Response for GET SoAV3.0</b> for the JSON Data	Successful. In the response, Workflow related fields will represent the data of scheduleTimeline (studyWorkflows → studyScheduleTimelines, workflowId → scheduleTimelineId and workflowDescription → scheduleTimelineDescription)
400	{ "statusCode": "400",	Application Exception

	<code>"message": "An error occurred"</code> }	
<b>401</b>	<code>{   "statusCode": "401",   "message": "Access Denied" }</code>	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
<b>403</b>	<i>Forbidden</i>	Invalid Client Certificate
<b>404</b>	<code>{   "statusCode": "404",   "message": "The requested study document not found" }</code>  OR  <code>{   "statusCode": "404",   "message": "The requested study design not found" }</code>	This can occur when requested Study Id is not found or Study Design is not found.
<b>500</b>	<i>Internal Server Error</i>	Web server/Web API down

### 3.4.5.GET eCPT Export

This endpoint allows user to retrieve the eCPT Export for each study design in a given study that conforms to USDM Version 3.0 that is stored in SDR.

Table 61 GET eCPT V4 Endpoint

Method	URL
GET	<code>/api/v4/studydefinitions/{studyId}/studydesigns/ecpt</code>

### REQUEST PARAMETERS

Table 62 GET eCPT Request V4 Parameters

Header	usdmVersion	String	Yes	3.0

## RESPONSE

Table 63 GET eCPT V4 Response

Status	Response	Comments
200	Refer <b><u>Response for GET eCPT V3.0</u></b> for the JSON Data	Successful. In the response, Workflow related fields will represent the data of scheduleTimeline (studyWorkflows → studyScheduleTimelines, workflowId → scheduleTimelineId and workflowDescription → scheduleTimelineDescription)
400	{ "statusCode": "400", "message": "An error occurred" }	Application Exception

401	{ "statusCode": "401", "message": "Access Denied" }	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	Forbidden	Invalid Client Certificate
404	{ "statusCode": "404", "message": "The requested study document not found" }  OR  { "statusCode": "404", "message": "The requested study design not found" }	This can occur when requested Study Id is not found or Study Design is not found.
500	Internal Server Error	Web server/Web API down

### 3.4.6.POST Validate USDM Conformance

This endpoint allows user to validate whether the study definition conforms to USDM Version 3.0 without submitting the study definitions. If the study definition is conformant with USDM Version 3.0, success response code (200 - Ok) will be returned, otherwise the endpoint will return list of conformance errors with failure response code (400 – Bad Request).

Table 64 POST Validate USDM Conformance V4 Endpoint

Method	URL
POST	/api/v4/studydefinitions/validate-usdm-conformance

### REQUEST PARAMETERS

Table 65 POST Validate USDM Conformance V4 Request Parameters

400	<pre> {   "statusCode": "400",   "message": "An error occurred" } </pre>	Application Exception
401	<pre> {   "statusCode": "401",   "message": "Access Denied" } </pre>	When the API is invoked without access token or an expired access token, then the API will give an unauthorized response.
403	<i>Forbidden</i>	Invalid Client Certificate

404	{ "statusCode": "404", "message": "The requested study document not found" }	When Study Title is given in query param and there is no matching study definition in SDR, or the requested URI is not valid.
500	Internal Server Error	Web server/Web API down

### 3.6. GET Revision history

This endpoint allows the user to retrieve the revision history for a study residing in the SDR Repository. The SDR captures the history of all changes done on a study definition, including entry date time, entry system and sdr upload version.

Table 73 GET Revision History Endpoint

Method	URL
GET	/api/studydefinitions/{studyId}/revisionhistory

#### REQUEST PARAMETERS

Table 74 GET Revision History - Request Parameters

Type	Param Name	Values	Mandatory	Sample Values

500	<i>Internal Server Error</i>	Web server/Web API down

### 3.8. GET Raw JSON

This endpoint allows user to retrieve a particular study irrespective of the usdmVersion that is stored in SDR. This is useful for retrieving study data in plain text (stringified JSON), which is conformant to a USDM version that is not being supported in the current running instance of SDR. At a given point in time SDR will only support 3 USDM versions. When it is upgraded to a version that doesn't support

any of the earlier versions of USDM, but the repository has studies conforming to those deprecated version, the data can be still retrieved via this endpoint. The version specific endpoints of that deprecated USDM version would have been decommissioned.

Table 79 GET Raw JSON Endpoint

Method	URL
GET	/api/studydefinitions/{studyId}/rawdata

## REQUEST PARAMETERS

Table 80 GET Raw JSON Request Parameters

Type	Param Name	Values	Mandatory	Sample Values
Path Parameter	studyId	String	Yes	25f58eb5-bda8-4c85-8a27-685af9f6743d

## 4. Testing the API Endpoint

### 4.1. Postman REST client Setup

This section details steps to test the SDR RI API endpoints using a REST client. For the purpose of this document the tool used is Postman REST Client.

#### PRE-REQUISITES:

- Self-Signed .pfx certificate configured for SDR API Access.
- Install **Postman Tool**

#### STEPS:

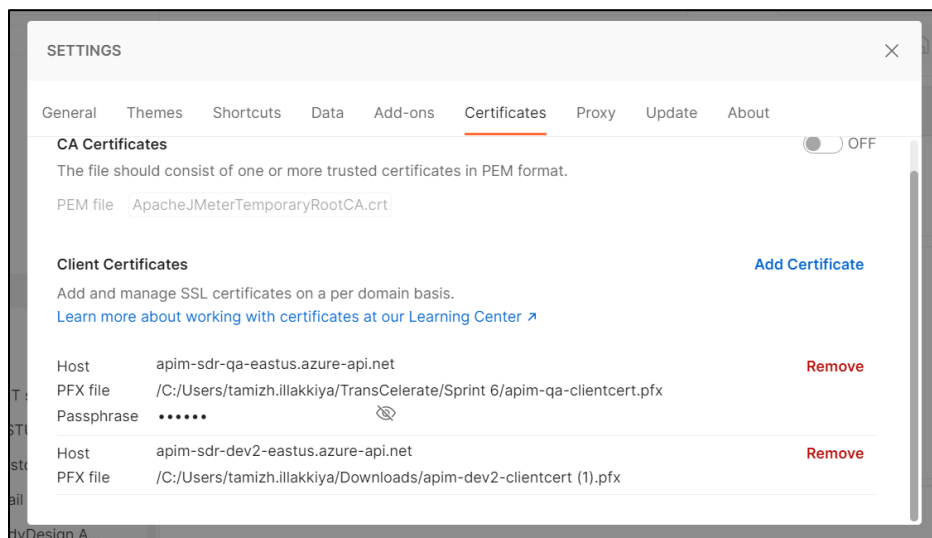

- Open postman and go to "Settings" option.

Figure 13 Postman Upload Certificate

- Go to "Certificates" tab and upload the client certificate and provide the Host Name and Passphrase (certificate password) for the client certificate.

Figure 14 Postman Add Client Certificate

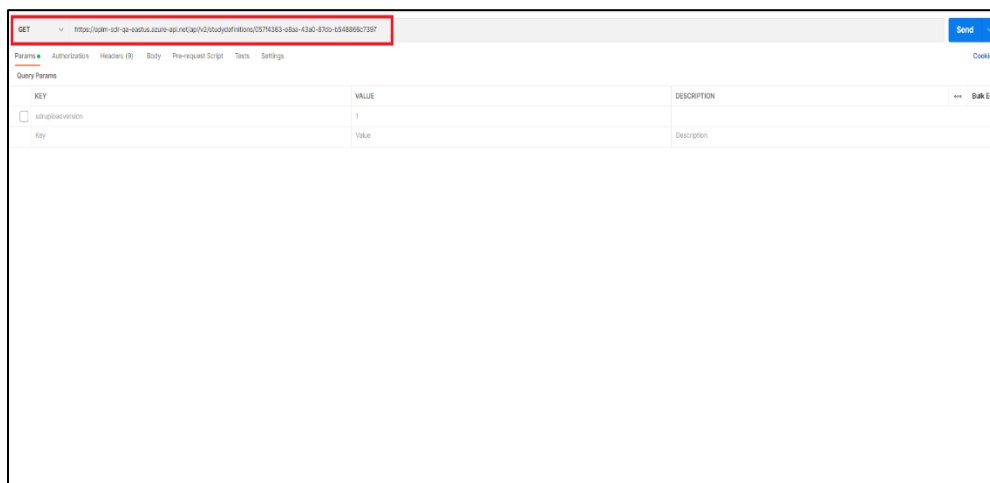

## 4.2. Accessing the GET API

### STEPS:

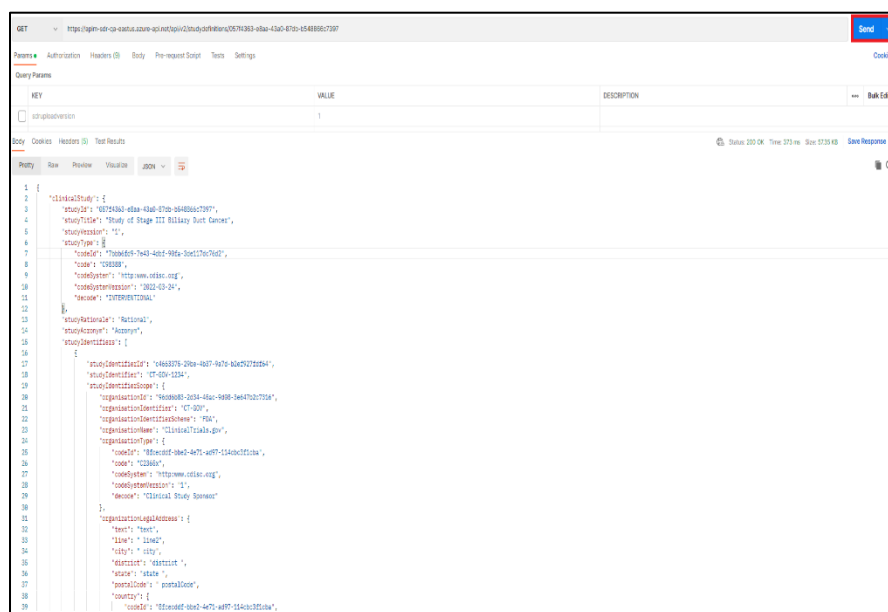

- i. Enter the URL for the GET Request URL (APIM endpoint) as mentioned below.  
<https://apim-sdr-envname-eastus.azure-api.net/api/v4/studydefinitions/{studyId}>
- ii. Get the **StudyId** from **Response for GET StudyV3.0** and replace the Study ID path parameter value in the GET URL.

Figure 15 Postman set HTTP Request for GET

- iii. Click on the “Send” button to get the study definition data for given studyId.

Figure 16 Postman Send Request

- iv. For a valid certificate and correct SDR API URL, the API Response of HTTP Status code 200 along with the data will be returned.

GEThttps://pdrh-tdh-qz-qz-np.netapp/v1/studydefinitions/0574363-0ba-43a0-05488667397
